		PRIMARY EXAMINER

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

IN THE CLAIMS

Claim 24, line 6, the word -- a -- has been inserted after the word "without".

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Claims **1-5** are allowable over the prior art of record because the prior art does not teach or suggest a process for the production of previtamin D comprising the steps of a first irradiation and a second irradiation as presently claimed, esp., the step of a second irradiation of said reaction mixture with light energy having a wavelength of approximately 313 nm, the reaction mixture containing no photosensitizer.

Claims **6-10** are allowable over the prior art of record because the prior art does not teach or suggest a process for producing previtamin D comprising the steps of a first irradiation and a second irradiation as presently claimed, esp., the step of a second irradiation of said reaction mixture with light energy having a wavelength of approximately from 300 to less than 330 nm and in the absence of a photosensitizer.

Application/Control Number: 10/649,287

Art Unit: 1753

Claims 24-29 are allowable over the prior art of record because the prior art does not teach or suggest a process for the production of vitamin D by light irradiation without the use of a photosensitizer comprising the steps of a first irradiation and a second irradiation as presently claimed.

The prior art does not contain any language that teaches or suggests the above.

Stevens teaches a first stage being irradiation of the selected starting material at 240-265 nm and the second stage being irradiation in the 290-400 nm range in the presence of anthracene (col. 4, lines 32-49).

Malatesta et al. teach a first stage being irradiation of the selected starting material at 245-260 nm and the second stage being irradiation in the 330-350 nm range (col. 1, lines 50-52; col. 2, lines 44-52; and Fig. 1). Applicant has shown that all of the compounds of interest in the process of making vitamin D have zero or near zero absorption of energy above 330 nm (Fig. 8).

Therefore, a person skilled in the art would not have been motivated to adopt the above conditions, and a prima facie case of obviousness cannot be established.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Edna Wong whose telephone number is (571) 272-1349. The examiner can normally be reached on Mon-Fri 7:30 am to 4:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nam Nguyen can be reached on (571) 272-1342. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
